

How DSS rates are calculated

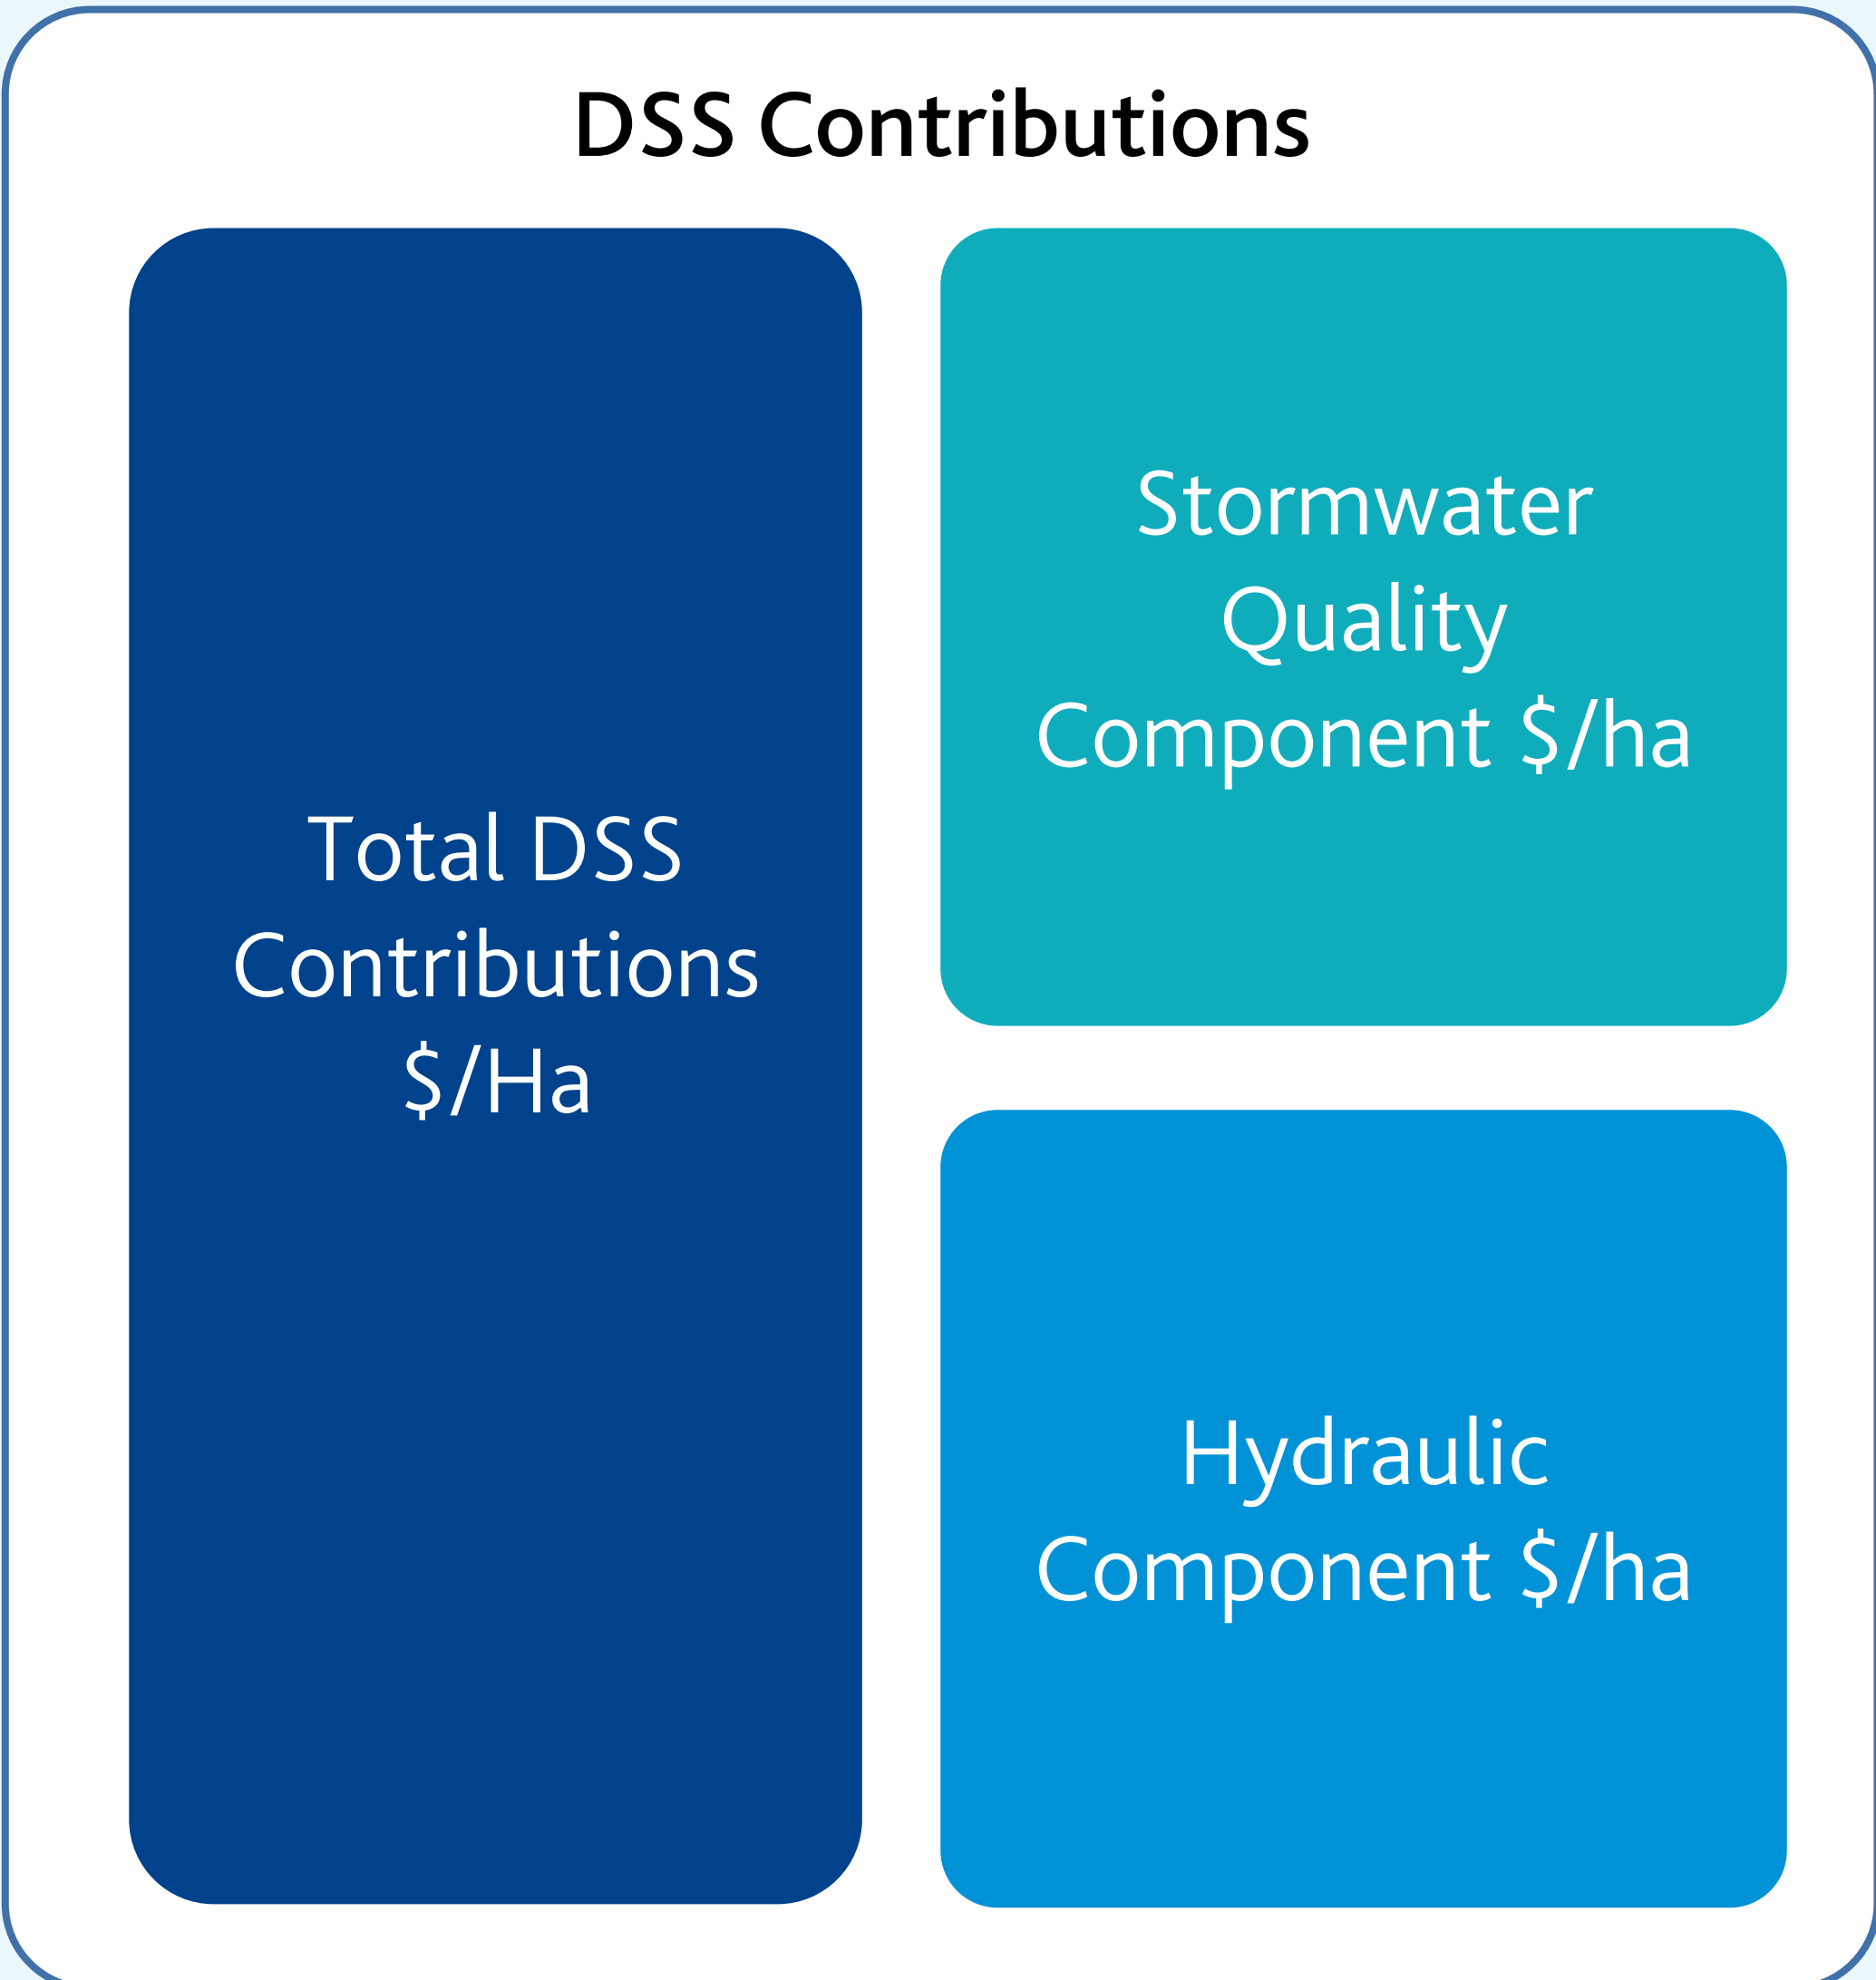

*Land reimbursement – DSS does not reimburse for all land required to facilitate DSS assets. Reimbursement is linked to the key asset type within the land. For example, if both a retarding basin (hydraulic asset) and wetland (stormwater quality asset) are both in the required DSS land, the land reimbursement costs will be attributed to the hydraulic component only of the DSS contribution.

=

- ^+ Service fee covers Melbourne Water’s costs in administering the DSS portfolio and services including:
- master planning
 - Precinct Structure Plan (PSP) servicing
 - financial and engineering reviews
 - management of DSS and development data
 - development assessments in DSS catchments (such as planning permits, certification, stormwater management strategies and the issuance of the Statement of Compliance)
 - issuance of Offer of Conditions
 - design assessments
 - tender assessments
 - project management
 - work surveillance.
